

Solution highlight

Conversation Landing page revamp

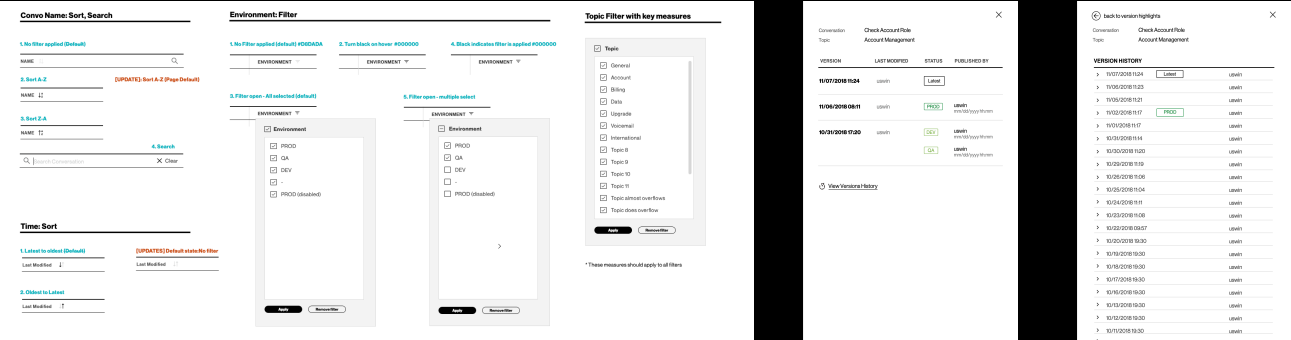

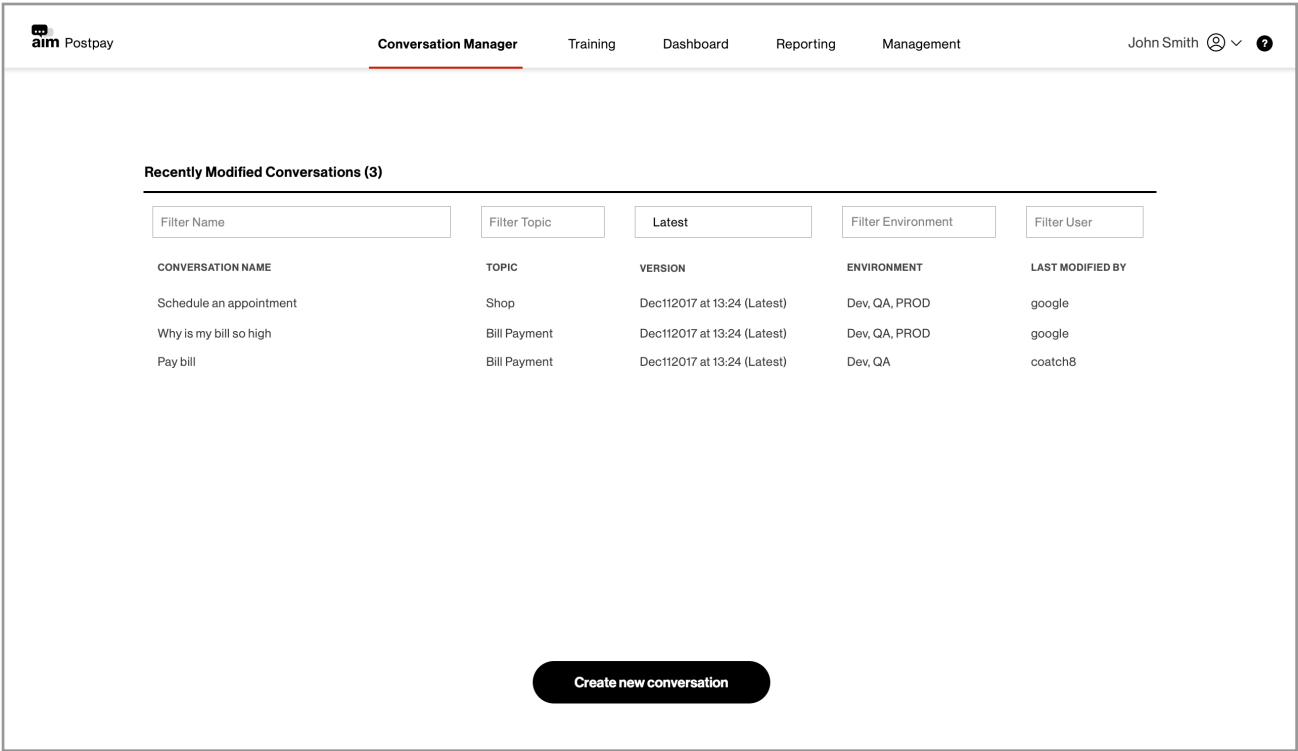

Table interaction - sort, filter, search

Conversation version side panel

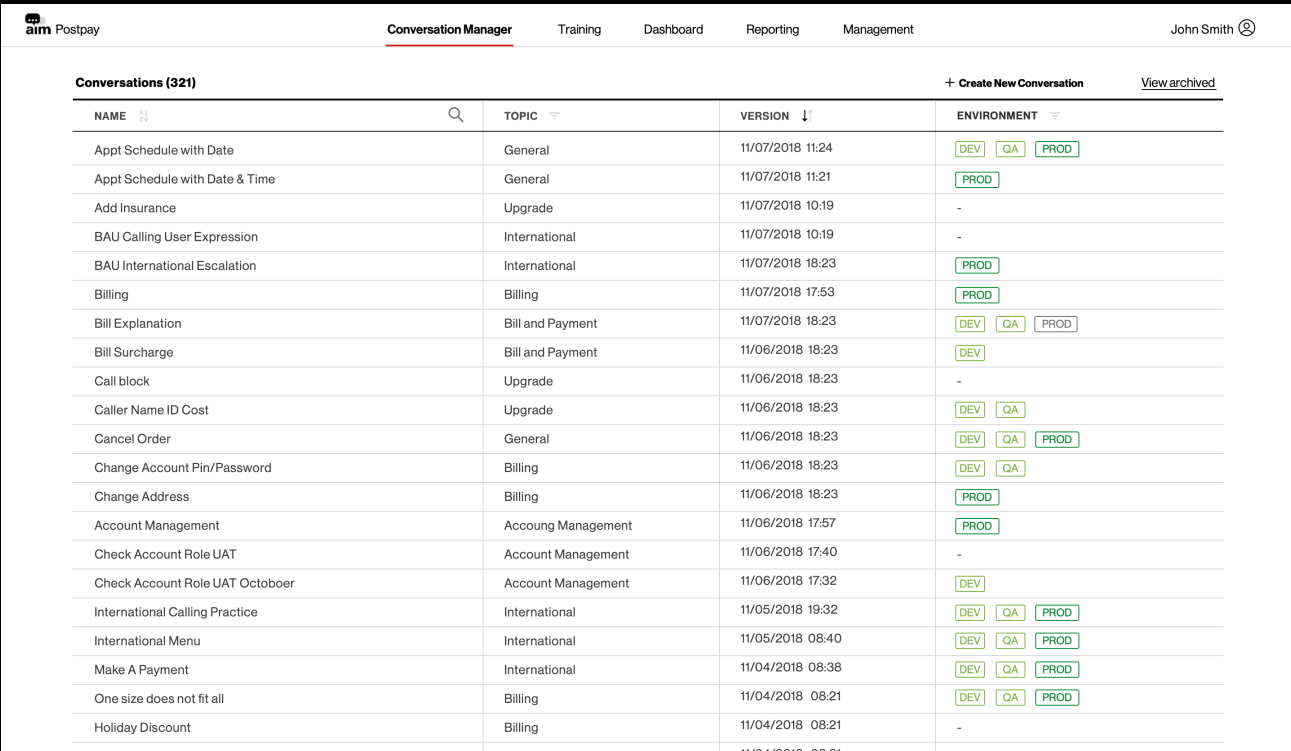

Major issue:

- Each edit saved will create a new version of the conversation
- each version is a list item, while the table by default sort latest
- filter interaction is broken
- format of the version is hard to read

All these make it so hard to find the version that a user is looking for.

Before

Improved on:

- Version grouping: always present users the latest version upfront together with an ability to select in detail page other published versions
- a functional and intuitive sort, filter, search
- scalability, readability and hierarchy

After
